

## Procedure for setting up PPP on Mac OSX

Make sure the USB modem is plugged into the computer

Click on Apple Icon (top left of screen)

Choose **System Preferences**

Click on **Network**

In the left column click on External Modem

### **Configuration:**

In the Configuration window choose “Add Configuration”

Name the Configuration (your choice) then click on “Create”

Enter telephone number (2732664)

Leave Account Name and Password fields blank

On same screen place check in “Show modem status in menu bar”

Click on “Advanced”

### **DNS tab:**

Click on + at bottom of DNS Servers window

Enter 134.161.1.33

Click on + again

Enter 134.161.1.39

### **PPP Tab**

In the Settings box choose Configuration

Place check in box “Connect using a terminal window (command line)”

Click OK then click Apply

Close Preferences window

On top Menu bar click on Phone receiver icon and choose “**Connect**”.

When the terminal window appears type in your ACAD/VMS username, press Enter, then type in your password and Enter again.

On the next screen choose option #7 (**PPP Access**)

Upon successful connection this window will disappear.

You now can start whatever application you use to navigate on the Internet.

To disconnect: Quit browsing application. Then click on Phone receiver icon in top menu bar and choose disconnect.
