

## Procedure for setting up PPP on Mac OSX

Click on Apple Icon (top left of screen)

Choose **System Preferences**

Click on **Network**

In the “**Show**” box, if Internal Modem is not an option, choose **Network Port Configurations**.

Place a check in the **Internal Modem** box.

Click Apply now.

In the “**Show**” box choose **Internal Modem**.

### **TCP/IP tab:**

In the “**Configure**” box **Using PPP** should be showing.

In the **DNS Servers** box enter the following values: 134.161.1.33 134.161.1.39

The “**Search Domains**” box requires no entry.

Click on Apply Now.

### **PPP tab:**

In the Telephone Number box enter: **273-2664**

All other boxes are to remain blank.

Click on **PPP Options**.

Under Session Options you can use default settings or change to personal liking.

Under Advanced Options check “**Connect Using a Terminal Window**”.

Click OK.

### **Modem tab:**

Place check in box “**Show Modem status in Menu bar**”.

Click Apply now.

Close Network Window

On top Menu bar click on Phone receiver icon and choose “**Connect**”.

When the terminal window appears type in your ACAD/VMS username, press Enter, then type in your password and Enter again.

On the next screen choose option #7 (**PPP Access**)

Upon successful connection this window will disappear.

You now can start whatever application you use to navigate on the Internet.

To disconnect: Quit browsing application. Then click on Phone receiver icon in top menu bar and choose disconnect.
