

Now you get to go out and do some measuring of your own! Take a ruler or measuring stick that has both metric and English system units. You may do this either individually or with a partner. You must measure at least 10 items around the classroom or school. You will measure these items in both the metric system and in the English system. Make sure to use the highest degree of accuracy that the ruler/measuring stick allows (1/16th of an inch, 1/10 of a centimeter). Mark the fraction AND decimal measurements on your sheet.

Item and Name	English Fraction	English Decimal	Metric Fraction	Metric Decimal
